

Service-oriented Architecture: A Public Health Perspective

HSP Consortium 14th General Meeting
New Orleans, LA
March 27, 2017

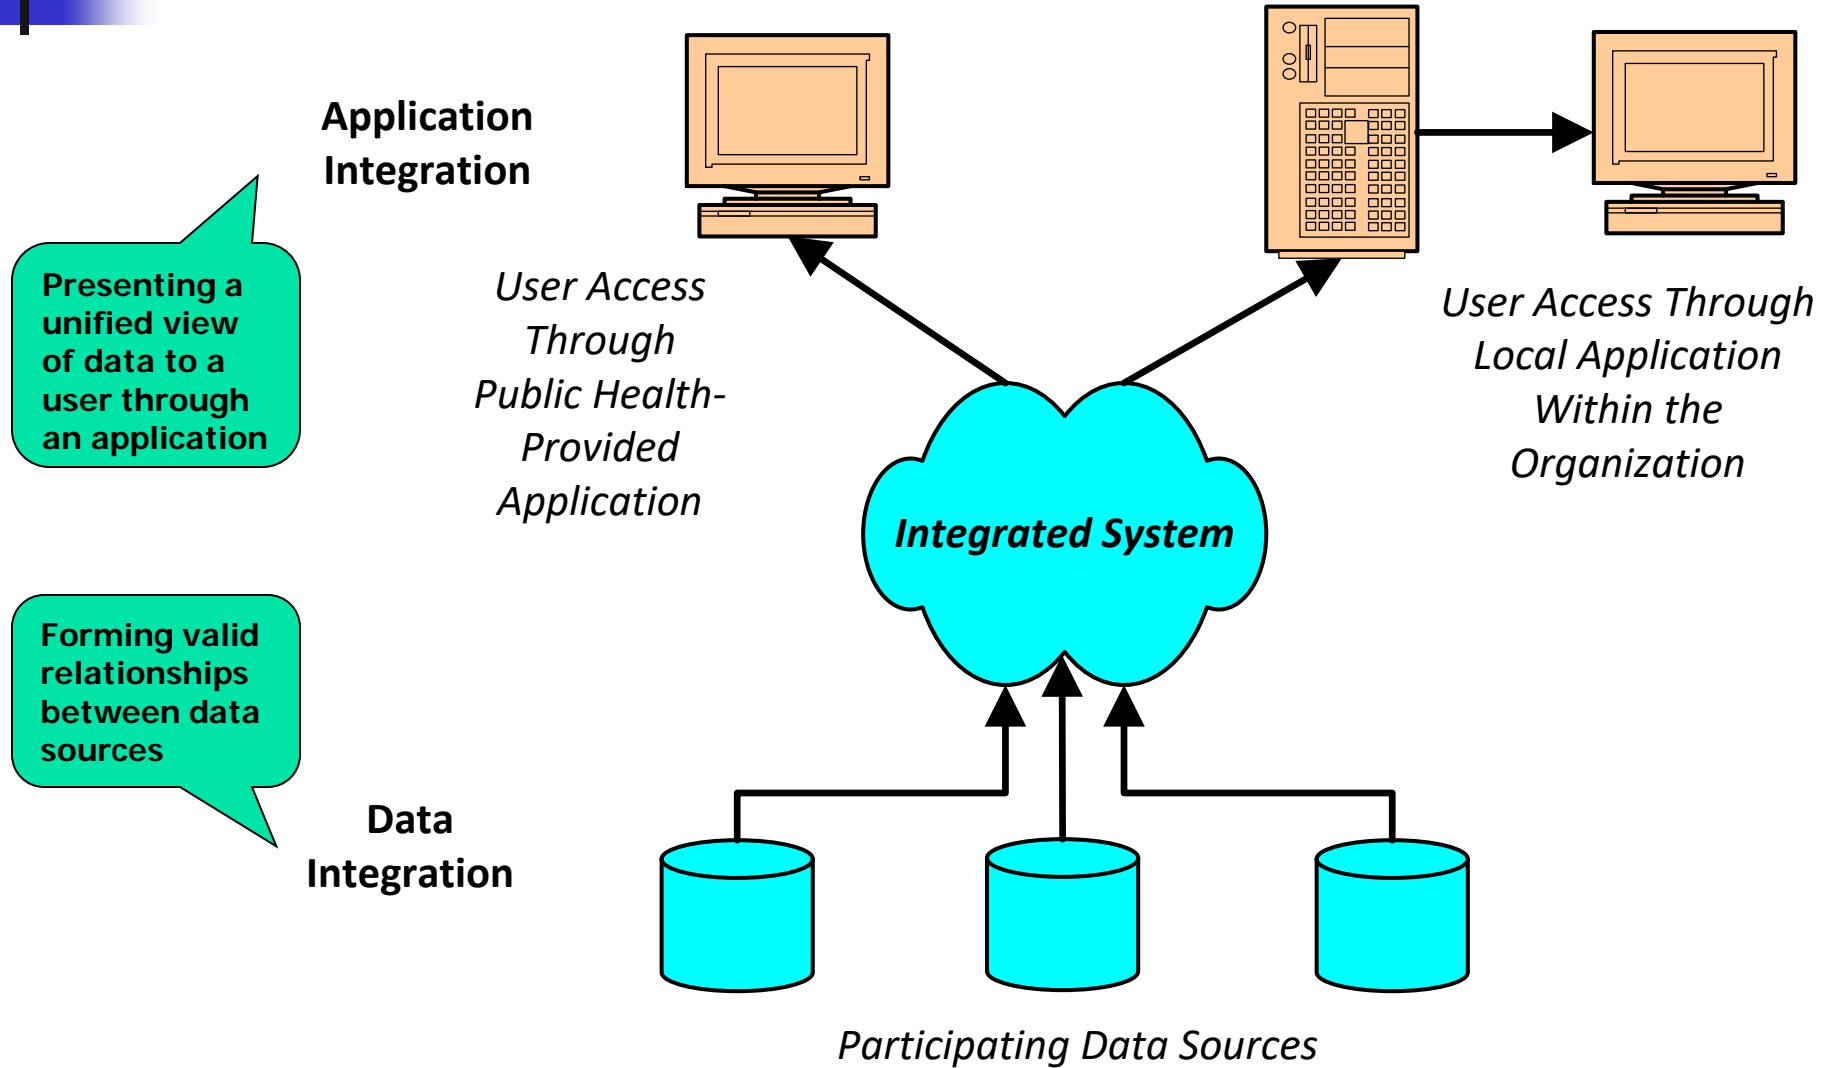

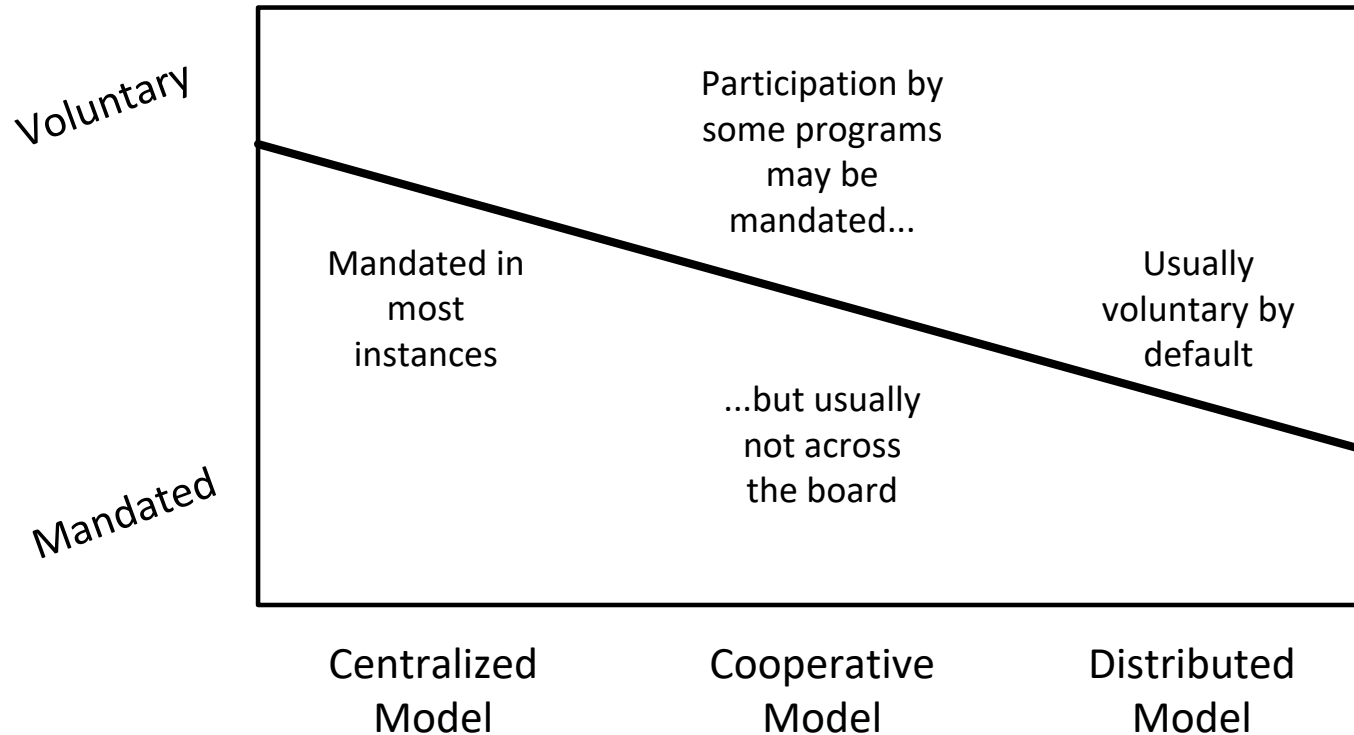

Challenges for Public Health

- 2,500+ public health agencies in the US...
... so they cannot/do not speak with one voice
- There is no Federal *public* health “law”
... so the legal framework is state (or even county) specific
- Most public health is Federally-funded (CDC & others)...
... so there are strong incentives to comply with their guidelines
- CDC primarily funds program by program...
... so jurisdictions develop “stovepipe” systems
- Technical infrastructure is increasingly centralized...
... so programs are less in control of what/how they deploy

Data Integration vs Application Integration

Agency-wide Integration

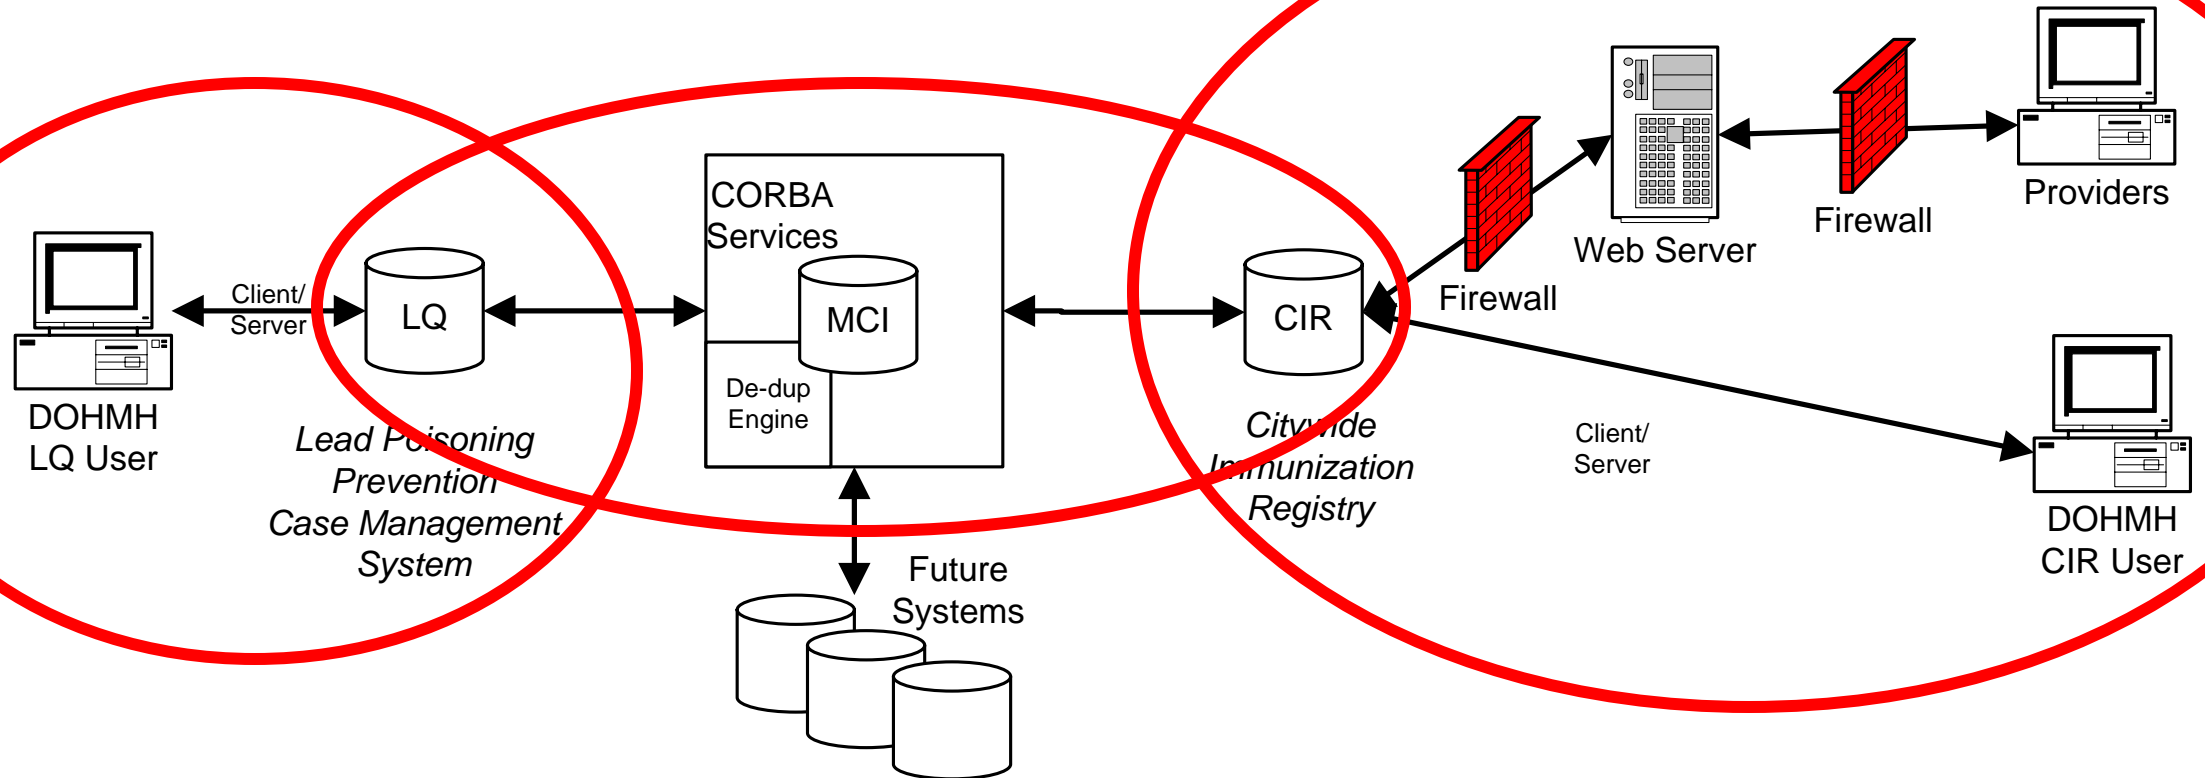

- Three models:
 - Centralized
 - Cooperative
 - Distributed (*de facto* for most)
- Can be implemented agency-wide or on a sub-organizational level
- Success will vary by Organizational, Technical, and Process attributes

Noam H. Arzt with Susan Salkowitz, *Evolution of Public Health Information Systems: Enterprise-wide Approaches*, July 2007.

<http://www.hln.com/assets/pdf/UT-White-Paper-Final.pdf>

Example: Data *and* Application Integration

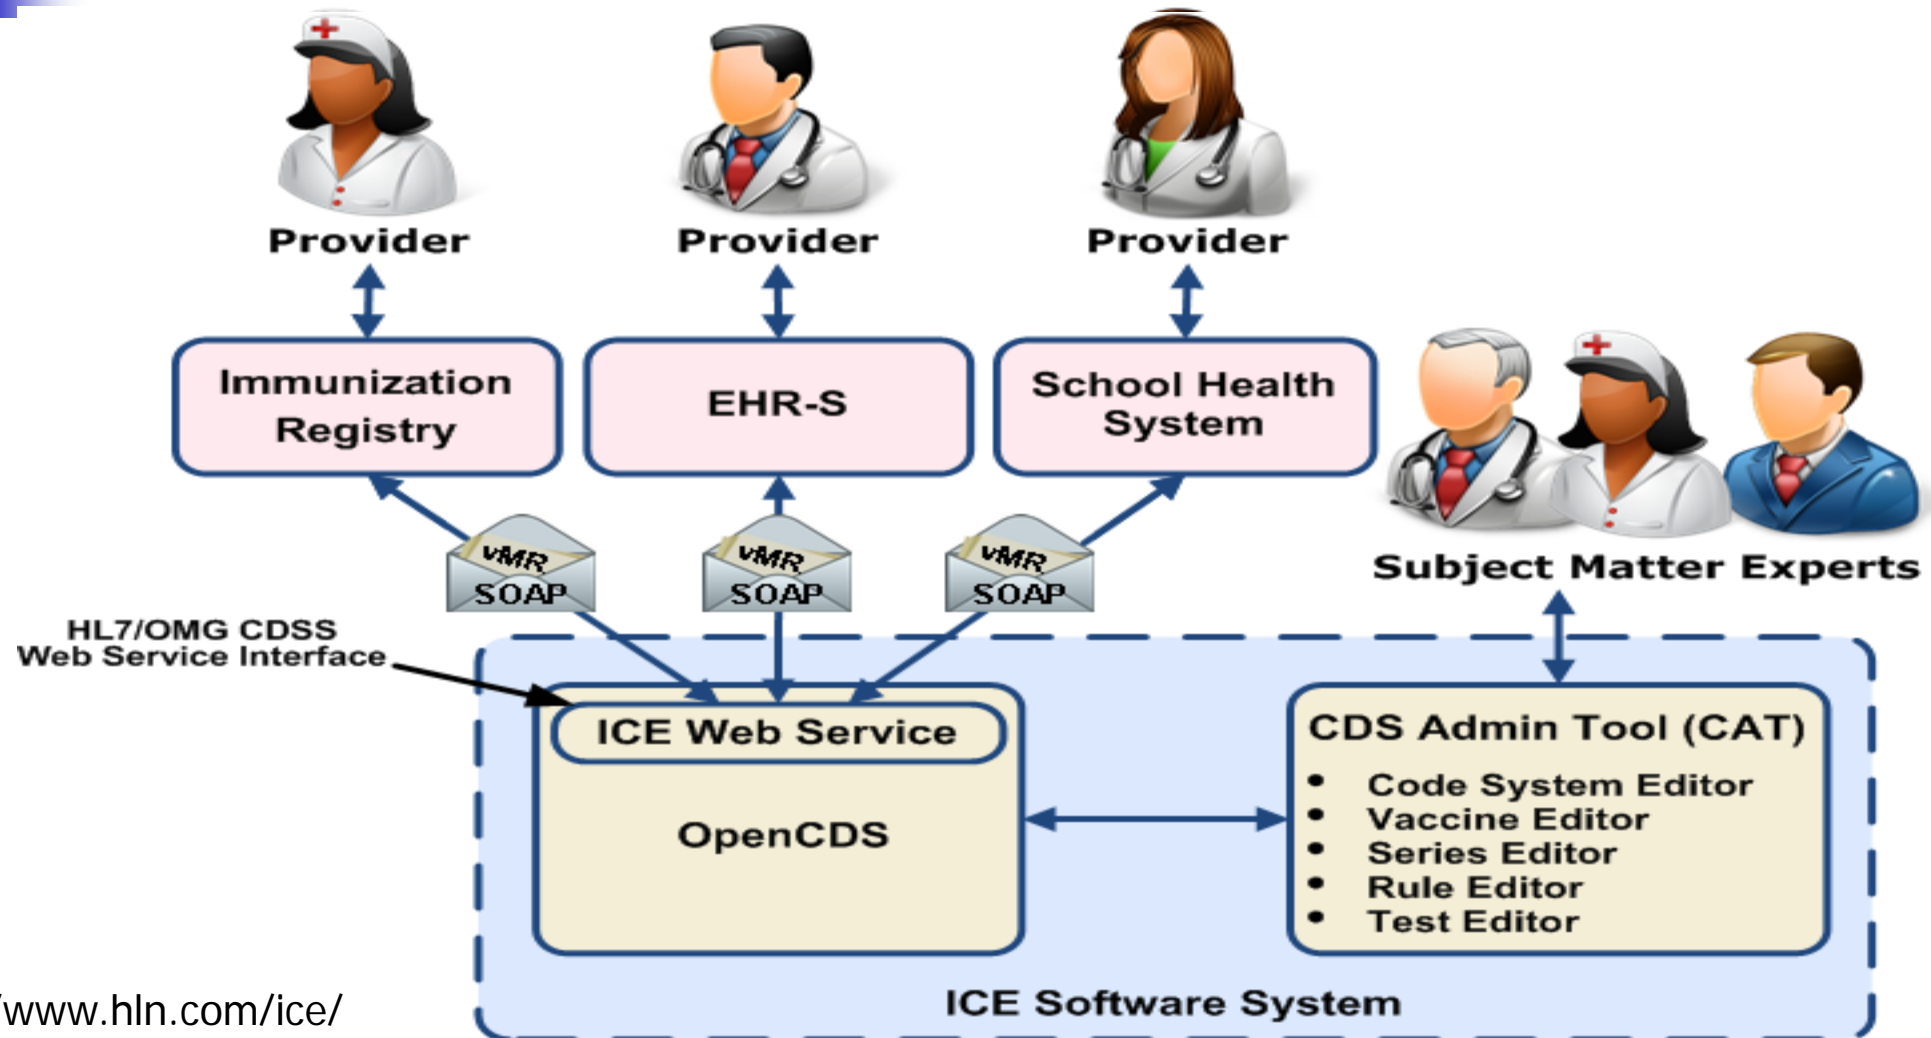

Typical Advice to Public Health Agencies

- Embrace national standards
- Enable “special functions” in your systems to the broader healthcare ecosystem
- Organize a formal informatics program and invest in informatics training

Shift to Interoperability

- We can't even agree on what Interoperability means

agree on scope
d views
ences
measure inter
t process
mpelling b
ver the rol
vernment
d to ignor
(S) tend to
reinvent the

- Our timelines are too aggressive. Or are they too lax?
- Different paces for different participants
- The tension between being too broad versus too granular
- Standards change too often
- "Consensus" has limited

Conclusions:

- Being skeptical of the notion of "consensus"
- Leveraging the past with an eye to the future
- Recognizing that this is more about the *pace* of change than the *substance* of change
- In the meantime, focus on semantics

a
't get it. Or do they?
nces are a bug to
others

Take Away Messages

- Public health is an active player in the SOA space
- Lots of need for internal systems integration as well as external interoperability
- CMS EHR Incentive Programs have pushed many of these activities to the forefront but they were always there and often legally mandated
- Technical standards are about the only thing that can drive public health to uniformity
